Installing the block

The installation process for this block is similar to that of all Moodle blocks. The block can be downloaded from: <https://github.com/Kylegoslin/Course-Request-Manager>

Once you have downloaded the zip folder, inside this folder you will see a folder titled "cmanager" This *entire* folder must be placed inside the *moodle/blocks* directory where your Moodle installation is installed.

Once you have installed the block, an automatic installer script that is custom to the CRM will run. This will set up some additional environment variables that are needed by the block and will run only one, directly after the block has been added.

You are then ready to start the configuration process, to make the CRM custom to your college or school.
